1. **USER STORY: Admin Login**

Card	- As an Admin - I want to log in using my username and password, - So that I can securely access the iSmart admin dashboard to manage system users and roles.
Summary	The system verifies Admin credentials. If correct and the account is active, the Admin is redirected to the Admin Dashboard.
In-Scope:	- Login form UI - Server-side authentication - Session management - Role-based redirection to Admin Dashboard.
Out of scope	- Social logins (Google, Facebook) - Two-factor authentication - Email verification - Automatic password reset
Trigger	Admin clicks “Login” on the login page.
Pre-condition	- A default Admin account has been created by the system provider - Admin account exists in the system database - Admin account status is Active
Business rule and error message	- Fields cannot be empty. (Error: "Field [Name] is required"). - Credentials must match DB. (Error: "Invalid username or password").

<table>
<tr>
<td>Screen design</td>

<tr>
<td>Screen description</td>
<td>Login page for System Administrator including:
Username input field, Password input field (masked with toggle visibility icon), Login button
Reset Password link (UI only).
<table>
<tr><th>Name</th><th>Description</th><th>Type</th><th>Min</th><th>Max</th><th>Maxlength</th><th>Required</th></tr>
<tr><td>username</td><td>admin login name</td><td>varchar(255)</td><td>3</td><td>30</td><td>30</td><td>yes</td></tr>
<tr><td>password</td><td>password</td><td>varchar(255)</td><td>6</td><td>50</td><td>50</td><td>yes</td></tr>
</table></td>
</tr>
<tr>
<td>Acceptance Criteria</td>
<td>AC1 – Required Field Validation

Given Admin leaves username or password empty
When clicking Login
Then the system displays validation error as defined in Business Rules

AC2 – Credential Verification

Given Admin enters username and password
When clicking Login
Then the system verifies credentials against encrypted data in database

AC3 – Successful Login

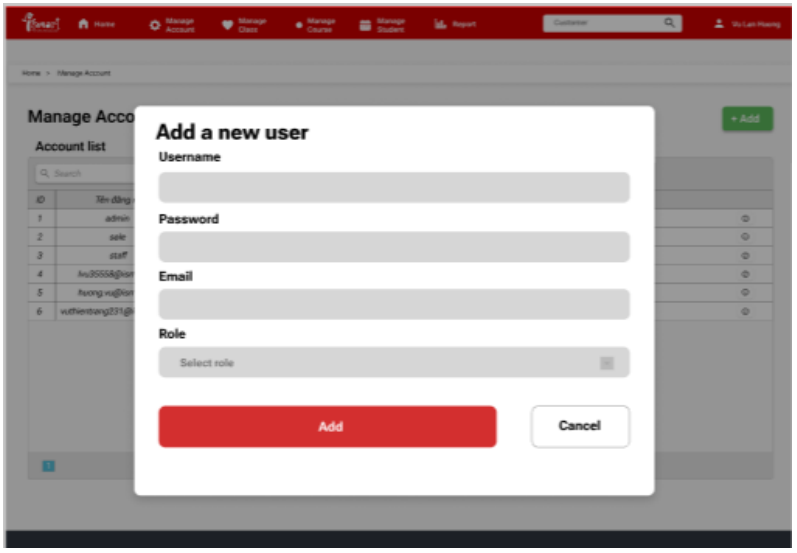
Given Admin enters valid credentials
When authentication succeeds</td>
</tr>
</table>

	Then system redirects to `/admin/dashboard` And displays the message: "Login successful. Welcome, Admin." **AC4 – Failed Login (Invalid Credentials / Inactive / Wrong Role unified)** Given Admin enters incorrect credentials OR account is inactive OR role is not Admin When authentication fails Then system denies access And displays error as defined in Business Rules **AC5 – Password Security** Given Admin is entering password Then characters are masked And user can toggle visibility using eye icon **AC6 – Session Protection** Given Admin has logged out When trying to access `/admin/dashboard` Then system redirects to Login page

2. **USER STORY: Admin Create User**

Card	- As an Admin - I want to create a new user account and assign a role - So that I can grant system access and control permissions
Summary	Admin creates a new user account by entering required information and assigning a role. The system validates input and stores the user in the database.
In-Scope:	- Create user form - Role assignment (Staff/Sale) - Input validation
Out of scope	- Exporting user list to Excel

	- Batch uploading users
Trigger	Admin clicks **“Add”** button
Pre-condition	- Admin is logged in. - System roles (Admin, Staff, Sale) are predefined in the DB.
Business rule and error message	- Username must be unique. (Error: "Username already exists"). - Role must be selected. (Error: "Please select a role"). - Required fields cannot be empty → "Field [Name] is required" - New user status is set to Active by default
Screen design	- 



Screen description

Create User screen includes:

- Username input field
- Full Name input field
- Password input field
- Email input field
- Role dropdown (Staff/Sale)
- Add button

Name	Description	Type	Min	Max	Maxlength	Required
username	Unique login ID	varchar	3	30	30	Yes
full_name	User full name	varchar	2	100	100	Yes
email	Contact email	email	5	100	100	Yes
role_id	User role	dropdown	-	-	-	Yes
password	User password	varchar	6	50	50	Yes

Acceptance Criteria	**AC1 – Open Create Form** Given Admin is on User Management screen When clicking "**Add**" Then system displays Create User form **AC2 – Required Fields Validation** Given Admin leaves any required field empty When clicking Add Then system shows validation error as defined in Business Rules **AC3 – Username Uniqueness** Given Admin enters a username that already exists When clicking Add Then system shows error as defined in Business Rules **AC4 – Email Uniqueness** Given Admin enters an email that already exists When clicking Add Then system shows error as defined in Business Rules **AC5 – Role Selection Required** Given Admin does not select a role When clicking Add Then system shows error as defined in Business Rules **AC6 – Successful User Creation** Given Admin enters valid information When clicking Add

	Then system creates new user And displays: "User created successfully." **AC7 – Default Status Assignment** Given a new user is created When saving to database Then system assigns status = Active by default **AC8 – Data Persistence** Given user is created successfully When returning to User List Then the new user appears with correct information **AC9 – Cancel Action** Given Admin is creating a user When clicking Cancel Then system returns to User List And no data is saved **AC10 – Password Handling** Given Admin enters password When submitting the form Then system stores password in encrypted format

3. **USER STORY: Admin View User List**

Card	- As an Admin - I want to view the list of users - So that I can monitor and manage system accounts.
Summary	Admin can view a list of all users in the system, including their basic information, and perform search operations.
In-Scope:	- View user list

	- Search user - Pagination - Display user information
Out of scope	- Exporting user list to Excel
Trigger	Admin navigates to **"User Management"** screen
Pre-condition	- Admin is logged in. - User data exists in the system
Business rule and error message	- System must retrieve data from User table. Error: "Unable to load user data" - When searching, the user data must exist in the system. Error: "User not found"
Screen design	-
Screen description	A management interface to control internal staff accounts and their system permissions.

Name	Description	Type	Min	Max	Maxlength	Required

username	Unique login ID	varchar	3	30	30	Yes
full_name	User full name	varchar	2	100	100	Yes
email	Contact email	email	5	100	100	Yes
role_id	User role	dropdown	-	-	-	Yes
password	User password	varchar	6	50	50	Yes

Acceptance Criteria

AC1 – Access User List

Given Admin navigates to User Management
When the page loads
Then system displays list of users.

AC2 – Display User Information

Given user list is displayed
Then each user record includes username, name, email, role, status, and created date

AC3 – Pagination

Given the number of users exceeds page limit
When the page loads
Then system displays pagination controls

AC4 – Navigate Pages

Given pagination is available
When Admin clicks Next/Previous/page number
Then system displays corresponding user list

	AC5 – Search Users Given Admin enters keyword (name/email) When clicking Search Then system filters and displays matching users **AC6 – No Result Found** Given no users match search criteria When performing search Then the system displays messages as defined in Business Rule. **AC7 – Data Load Failure** Given system cannot retrieve user data When loading page Then system shows error as defined in Business Rules **AC8 – Action Buttons Availability** Given user list is displayed Then each row contains button (i) dropdown : Edit, Delete, and Reset Password buttons

4. USER STORY: Admin Update User

Card	- As an Admin - I want to update user information - So that I can manage roles and account status
Summary	Admin edits existing user information including full name, role, and status. The system validates input and updates the user record.
In-Scope:	- Update user information - Role assignment - Status update (Active/Inactive) - Input validation

Out of scope	- Delete user
Trigger	Admin clicks (i) **"Edit"** button on a user row
Pre-condition	- Admin is logged in. - User data exists in the system
Business rule and error message	- Username/ Password cannot be modified - Role must be selected. (Error: "Please select a role"). - Required fields cannot be empty → "Field [Name] is required"
Screen design	
Screen description	Edit User screen allows Admin to update user information. The screen includes: - Username field (read-only) - Email field (read-only) - Full Name input field

- Role dropdown (Staff/Sale)
- Status dropdown (Active/Inactive)
- Save button
- Cancel button

Name	Description	Type	Min	Max	Maxlength	Required
username	Unique login ID	varchar	3	30	30	Yes
full_name	User full name	varchar	2	100	100	Yes
email	Contact email	email	5	100	100	Yes
role_id	User role	dropdown	-	-	-	Yes
password	User password	varchar	6	50	50	Yes
status	Account status	dropdown	-	-	-	Yes

Acceptance Criteria

AC1 – Open Edit Form

Given Admin is on User Management screen
When clicking Edit on a user
Then system displays Edit User form with existing data

AC2 – Display Existing Data

Given Edit form is opened
Then all user fields are pre-filled with current information

	AC3 – Read-only Fields Given Edit form is displayed Then Username and Password fields cannot be edited **AC4 – Required Fields Validation** Given Admin clears required fields When clicking Save Then system shows error as defined in Business Rules **AC5 – Role Validation** Given Admin does not select a role When clicking Save Then system shows error as defined in Business Rules **AC6 – Successful Update** Given Admin enters valid information When clicking Save Then system updates user successfully And displays: "User updated successfully." **AC7 – Status Update** Given Admin changes user status When saving Then system updates status correctly **AC8 – Cancel Action** Given Admin is editing a user When clicking Cancel Then system returns to User List And no changes are saved

5. **USER STORY: Admin Delete User**

Card	- As an Admin - I want to delete a user account - So that I can remove unused or invalid accounts from the system.
Summary	Admin deletes an existing user account from the system. The system requires confirmation before deletion and ensures that restricted actions are prevented.
In-Scope:	- Delete user - Confirmation dialog - Remove user from system
Out of scope	- Soft delete (Inactive status) - Batch delete - Restore deleted user
Trigger	Admin clicks (i) **"Delet"** button on a user row
Pre-condition	- Admin is logged in. - User exists in the system
Business rule and error message	- System must confirm before deletion Error: "You are definitely delete this account?" - System must remove user from database. Error: "Unable to delete user".

<table>
<tr><td>Screen design</td><td></td></tr>
<tr><td>Screen description</td><td>Edit User screen allows Admin to delete user information.
The screen includes:
- User table with list of users
- (i) Delete button on each row
- Confirmation popup with:
- Yes button
- Cancel button
<table>
<tr><th>Name</th><th>Description</th><th>Type</th><th>Min</th><th>Max</th><th>Maxlength</th><th>Required</th></tr>
<tr><td>delete</td><td>Delete user button</td><td>type</td><td>-</td><td>-</td><td>-</td><td>Yes</td></tr>
<tr><td>yes</td><td>confirm user button</td><td>type</td><td>-</td><td>-</td><td>-</td><td>Yes</td></tr>
</table></td></tr>
</table>

	cancel	cancel user button	type	-	-	-	Yes

Acceptance Criteria

AC1 – Trigger Delete Action

Given Admin is viewing User List
When clicking (i) Delete on a user
Then system displays confirmation dialog

AC2 – Confirmation Message

Given confirmation dialog is displayed
Then system shows message as defined in Business Rules

AC3 – Confirm Deletion

Given Admin confirms deletion
When clicking Yes
Then system proceeds with deleting the user

AC4 – Cancel Deletion

Given confirmation dialog is displayed
When clicking Cancel
Then system closes dialog
and no action is performed

AC5 – Successful Deletion

Given deletion is successful
When system completes operation
Then user is removed from User List
And displays: "User deleted successfully."

AC6 – Data Persistence

Given a user is deleted
When refreshing or reloading the list
Then the deleted user no longer appears

	AC7 – System Error Handling Given system fails to delete user When performing deletion Then system shows error as defined in Business Rules **AC8 – Access Restriction After Deletion** Given a user account has been deleted When that user attempts to log in Then system denies access

6. **USER STORY: Admin Reset User Password**

Card	- As an Admin - I want to manually reset a user's password and generate a temporary one - So that I can provide it to users who have lost access.
Summary	Admin views password reset requests from users and resets their password. The system generates a temporary password and displays it for the Admin to share with the user manually.
In-Scope:	- "Reset Password" functionality - Password generation - Displaying temp password - Audit logging
Out of scope	Automatic email delivery. OTP / verification
Trigger	Admin clicks **"Reset Password"** on a user request
Pre-condition	- Admin is logged in - At least one reset request exists. - Target user account exists

<table>
<tr><td></td><td></td></tr>
<tr><td>Business rule and error message</td><td>- Temp password must be 8-12 alphanumeric characters.
- Admin must confirm reset action "Confirm reset for [Username]?"
- System must update password immediately</td></tr>
<tr><td>Screen design</td><td> </td></tr>
<tr><td>Screen description</td><td>Reset Password screen allows Admin to handle user reset requests.
The screen includes:
- List of reset requests (Username, Request Time)
- Reset Password button for each request
- Confirmation popup
- Result popup showing temporary password
- Copy button to copy password
<table>
<tr><th>Name</th><th>Description</th><th>Type</th><th>Min</th><th>Max</th><th>Maxlength</th><th>Required</th></tr>
<tr><td>username</td><td>User requesting reset</td><td>varchar</td><td>3</td><td>30</td><td>30</td><td></td></tr>
<tr><td>request_time</td><td>Time of reset request</td><td>date time</td><td>-</td><td>-</td><td>-</td><td>Yes</td></tr>
<tr><td>temp_password</td><td>Generated temporary password</td><td>varchar</td><td>8</td><td>12</td><td>12</td><td></td></tr>
</table></td></tr>
<tr><td>Acceptance Criteria</td><td>AC1 – View Reset Requests</td></tr>
</table>

	Given Admin accesses Reset Password screen When the page loads Then system displays list of reset requests **AC2 – Display Request Information** Given reset request list is displayed Then each request includes username and request time **AC3 – Trigger Reset Action** Given Admin selects a request When clicking Reset Password Then system displays confirmation dialog **AC4 – Confirm Reset** Given confirmation dialog is shown When Admin clicks Confirm Then system generates temporary password **AC5 – Cancel Reset** Given confirmation dialog is shown When Admin clicks Cancel Then system closes dialog And no action is performed **AC6 – Generate Temporary Password** Given reset is confirmed When system processes request Then a random 8–12 character password is generated **AC7 – Display and Copy Password** Given password is generated Then system displays it in popup And provides Copy button

	AC8 – Update Password Immediately Given reset is completed When system updates database Then old password is replaced And user is forced to log out
